

MonerOS Installation Manual

- 1) Download MonerOS .tar.gz file
- 2) open your Terminal (Mac/Linux) or Command Prompt/PowerShell (Windows)
- 3) Enter the following command, replacing filename with the file location and destination with location you would like the files to be extracted to:

```
tar -xvzf filename.tar.gz -C /path/to/destination
```

For example, on Windows the command would look like this:

```
tar -xvzf "C:\Users\JohnSmith\Downloads\MonerOS-v1.005-Full.tar.gz" -C  
"C:\Users\JohnSmith\Downloads"
```

- 4) Download and Install the appropriate version of balenaEtcher for your current operating system (Windows, macOS, or Linux)
- 5) Open the balenaEtcher and click "**Flash from file**" to select the .img file of HotWalletOS
- 6) Click "**Select target**" and choose your target drive
- 7) Click "**Flash!**" and wait for the software to finish writing and validating the drive
- 8) Repeat step 4-5 for ColdWalletOS .img file
- 9) Once both HotWalletOS and ColdWalletOS are flashed, shut down the computer
- 10) Insert ColdWalletOS and switch the computer back on.
- 11) While the computer is turning on, rapidly tap the designated boot menu key for your specific motherboard or laptop. The most common keys are **F12, F11, F2, or Esc**.
- 12) Use the arrow keys on your keyboard to select the ColdWalletOS drive from the on-screen menu.
- 13) Press "Enter" to boot ColdWalletOS and continue by using MonerOS User Manual (included with the extracted files from earlier).
